

Law practice's best defence is a Forms to APEX migration

This law practice is one of the most prominent government-debt collectors in the United States. The firm currently manages more than \$10 billion in delinquent accounts receivable for its public sector clientele.

CHALLENGE

The client wished to update its tax collection systems as they were running on outdated versions of its Database, Oracle Forms and oracle APEX, and using a combination of role based & application-level security.

PRIORITIES

- Improve quality of services to customers through innovation and efficiency
- Improve UX experience
- Achieve a high degree of information security

RESULTS

Once the client had updated its DB and applications, Insum leveraged existing database packages, procedures, and functions to migrate 117 Oracle Forms to Oracle APEX. Several native APEX feature enhancements were added without affecting delivery.

PROJECT STATS

Service: Forms Migration

Timeline: October 19'-
November 20'

Location: USA

KEY PRODUCTS

- Oracle DB 12c
- Oracle APEX 18.2 and its tools
- RAS (Real Application Security)

REAL APPLICATION SECURITY

Oracle Database 12c introduced Oracle Real Application Security (RAS), the next generation Oracle Virtual Private Database (VPD). Oracle RAS remains the industry's most advanced technology for supporting application security requirements.
